

IN THE CLAIMS:

The following is a complete listing of the claims in this application, reflects all changes currently being made to the claims, and replaces all earlier versions and all earlier listings of the claims:

Claims 1 - 68. (Canceled)

Claim 69. (New) A television broadcasting data receiving apparatus,
comprising:

a receiving unit adapted to receive television broadcasting data which was
subjected to multiplexing;

an acquiring unit adapted to acquire print data and program attribute
information, included in the television broadcasting data received by said receiving unit;

an analyzing unit adapted to analyze print additional information for
printing of the print data, included in the program attribute information acquired by said
acquiring unit; and

a display control unit adapted to output, to a display device on the basis of
the print additional information analyzed by said analyzing unit, display data associated with the
print additional information together with program data associated with the television
broadcasting data received by said receiving unit.

Claim 70. (New) An apparatus according to claim 69, wherein said acquiring

unit acquires the program attribute information associated with the program data displayed by said display device.

Claim 71. (New) An apparatus according to claim 69, further comprising:

an accepting unit adapted to accept a printing instruction from a user; and

a print controlling unit adapted to control the output of the print data to a print device on the basis of the printing instruction,

wherein said accepting unit accepts the printing instruction from the user in a period during which said display controlling unit effects a display which indicates that printing based on the print additional information is possible.

Claim 72. (New) An apparatus according to claim 69, further comprising:

an accepting unit adapted to accept a storing instruction from a user; and

a storage controlling unit adapted to store the print data in a storage unit on the basis of the storing instruction,

wherein said accepting unit accepts the storing instruction from the user in a period during which said display controlling unit effects a display which indicates that storing based on the print additional information is possible.

Claim 73. (New) An apparatus according to claim 69, wherein the print additional information includes information for specifying a transmission period of time of the print data, and wherein said display controlling unit displays a print execution time of the print

data on the basis of the transmission period.

Claim 74. (New) An apparatus according to claim 69, wherein in case that there are a plurality of types of print additional information to be displayed by said display device, said display controlling unit displays the respective display data associated with the plurality of types of print additional information so that the display of each of the respective display data is switched over therebetween at a predetermined time interval.

Claim 75. (New) A control method of a television broadcasting data receiving apparatus, comprising:

a receiving step of receiving television broadcasting data which was subjected to multiplexing;

an acquiring step of acquiring print data and program attribute information, included in the television broadcasting data received in said receiving step;

an analyzing step of analyzing print additional information for printing of the print data, included in the program attribute information acquired in said acquiring step; and

a display control step of outputting, to a display device on the basis of the print additional information analyzed in said analyzing step, display data associated with the print additional information together with program data associated with the television broadcasting data received in said receiving step.

Claim 76. (New) A method according to claim 75, wherein said acquiring step

acquires the program attribute information associated with the program data displayed by said display device.

Claim 77. (New) A method according to claim 75, further comprising:

an accepting step of accepting a printing instruction from a user; and

a print controlling step of controlling the output of the print data to a print device on the basis of the printing instruction,

wherein said accepting step accepts the printing instruction from the user in a period during which said display controlling step effects a display which indicates that printing based on the print additional information is possible.

Claim 78. (New) A method according to claim 75, further comprising:

an accepting step of accepting a storing instruction from a user; and

a storage controlling step of storing the print data in a storage unit on the basis of the storing instruction,

wherein said accepting step accepts the storing instruction from the user in a period during which said display controlling step effects a display which indicates that storing based on the print additional information is possible.

Claim 79. (New) A method according to claim 75, wherein the print additional information includes information for specifying a transmission period of time of the print data, and wherein said display controlling step displays a print execution time of the print data on the

basis of the transmission period.

Claim 80. (New) A method according to claim 75, wherein in case that there are a plurality of types of print additional information to be displayed by said display device, said display controlling step displays the respective display data associated with the plurality of types of print additional information so that the display of each of the respective display data is switched over therebetween at a predetermined time interval.

Claim 81. (New) A computer-executable program for causing a television broadcasting receiving apparatus to execute the control method set out in claim 75.

Claim 82. (New) A computer-readable recording medium which stores the program set out in claim 81.
